2. Citations and explanations (Rule 70.7)

Reference is made to the following document:

D1: EP-A-1 508 581 (DEGUSSA AG) 23 February 2005
(2005-02-23)

D1 is considered to be the closest prior art with respect to the subject matter of claim 2. It discloses a radiation-curable coating composition comprising at least one prepolymer having at least two ethylenically unsaturated double bonds, and at least one ketone and/or ketone/formaldehyde resin (claim 1).

The subject matter of claim 2 therefore differs from the known D1 in that the resins A and/or B have an ethylenically unsaturated moiety.

The subject matter of claim 2 is therefore novel (PCT Article 33(2)).

Since it is not sufficiently clear from the examples what the technical effect presented from the distinguishing feature might be, the objective problem addressed by the present invention can be considered only that of using alternative mixtures.

Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;
citations and explanations supporting such statement

The solution proposed for this problem in claim 2 of the present application involves an inventive step for the following reasons (PCT Article 33(3)):

None of the citations from the available prior art gives a person skilled in the art any indication to the inventive resins, which additionally have ethylenically unsaturated moieties incorporated by polymer-analogous reaction in the resin, let alone that such resins are suitable for the use claimed.

Claims 3-33 are dependent on claim 2 and therefore likewise meet the PCT requirements for novelty and inventive step.
